

New Bedford, July 26/90

Dear Dr. Wats.

I send by mail separate
packages a few plants of *Samolus tetrandrus*
3 weeks later than the last, & as the berries
are now falling off & consist mostly of seeds
~~you may find~~
I conclude that they will not change materially
in color; if however I find any more mature
will send them. I also send for
inspection what I have named:

Plantago Virginica

Lechea major

" *minor*

" *thymifolia*

Please say if I am correct. I have no use
for the plants as I have duplicates.

Please address to Newquitt Mass.

July 27
